

## **TAIL END PET & RESORT SPA PAMPERS PETS & CUSTOMERS WITH LESS ECHO & A QUIETER PLACE...**

At a posh pet & resort in South Florida they had to solve a common noise problem that occur within pet oriented business, kennels and such. Echo and reverberation of barking dogs.

### **NOISE CONTROL CONTROL**

The construction characteristics of facilities such as kennels and boarding facilities, and yes pet spas, are often bare with lots of flat hard surfaces. This allows optimum cleanliness and construction able to hold high traffic and high abuse areas. However, the dogs naturally excited bark and that echoes through rooms at a rapid pace. Staff complained about ear aches, an uncomfortable work environment and the increased noise fed anxiety to the occupants... eliminating that echo and reverberation is the challenge.

When they called us to discuss their needs we knew exactly what to deliver. Our ANC-600 Acoustical Ceiling Baffles are available a variety of PVC colors, are easily installed, superior in solving reverberation problems as well as easy to clean.

Hanging these from the ceiling down the kennel run immediately reduced the echo and absorbed the harsh noise traveling through the kennel. In addition, it added some bright colors to the kennel run improving aesthetics as well as its purpose... reverberation control.

The crisp corners and finished facing with PVC color finishing completed the noise kennel and while unable to eliminate the noise source, barking dogs, they achieved night and day results on removing noise irritants. Happier workers, Happier Dogs, Happier Customers and of course, Happier Management.

"So thrilled that we realized our exam rooms can benefit for more ANC products"

-Tail End Pet Resort & Spa

Products Used:  
ANC-600 - Premium Ceiling Baffle - PVC Color Finish

### **NOISE CONTROL SOLUTION RESULTS**

Once installed Tail End management and staff were thrilled and the products were a hit. Tail End recognized the value of the Acoustic Ceiling Baffles and realized that their exam rooms could benefit from this type of acoustic solution. Aesthetic, cost-effective and most importantly it solved the problem.
