

Sound Absorbing Bass Reproduction System for Improved Acoustics

Bass reproduction system improves the quality of Bass in audio and home theatre environments by removing unwanted low frequencies.

Bass Reproduction System designed to allow you to hear full bass extension your speakers are capable of reproducing by capturing the standing waves which are formed by sound bouncing of walls, floors & ceilings.

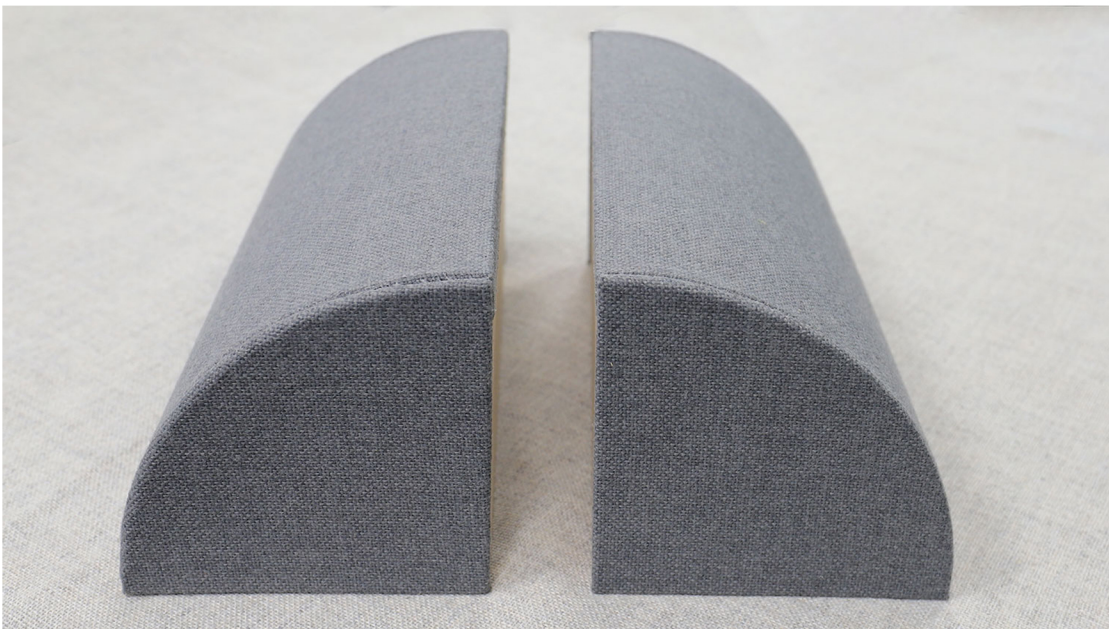

This sculptured sound absorbing modular panel is used for wall, corner and ceiling applications. Available in halfrounds or quarter-rounds.

Constructed from curved 1" thick acoustical glass fiber (6-7 PCF) with wooden supports added for stability and strength. Covered with Guilford of Maine FR701 fabric - 48 colors.

Custom sizes are available. Fax or email any room dimensions and we will help you configure what you need.

Physical Properties
