## CASE STUDY

Institutional Noise Control Solutions

### Noisy Gym Transformed into Sound Lecture Hall?

The University of Appalachia / Pharmacy School had typical needs like other institutions... budget concerns and to make the most of existing space. The challenge of turning a noisy gym into a sound lecture hall for a true multi-purpose space.

### Noise Control Challenge

Multi-purpose spaces.. wonderful spaces that often give schools and colleges alot more space and function, most importantly cost-eﬀectively solving budget and/or space restraints. University of Appalachia was no diﬀerent in the need for more room. Thei gymnasium if handled properly could house large audiences and serve as a lecture hall. However like all gymnasiums.. the large space, hard reflective surfaces are perfect environment for echo and loud reverberation problems.

**(The Hall is Now) a pleasant and welcoming space rather than noise and loud**

All Noise Control immediately understood the task at hand and the problems that came with it. Offering a simple, solid solution would ﬁt within their budget and provide a product with little interruption and quick installation. The ANC-600 Ceiling Baffles are perfect for any echo and reverberation problem... especially those in gymnasiums and large spaces. They are installed in the ceiling and do a fantastic job of absorbing the renegade sound waves that great the reverberation. The Class A fire-rated lightweight panels were also a safe solution the University. The bafles come in a variety of colors in PVC and Fabric covering and can acheive an aesthetic look with their ﬁnished look. There simply is no better product to hang from the ceilings which absorbs sound waves as the ANC-600. With thickness of 1" or 2" the NRC rating range can be anywhere from .90 to 1.15

The panels are installed approx 30" apart over the entire reverberant area and can result in an astounding 4 to 12 decibel reduction in general noise.

### Noise Control Solution Results

The result was a pleasing, cost-eﬀective sound absorption product which reduced noise considerably allowing the gymnasium to become a sound lecture hall. Bringing clarity to lecture noises and for gym events a considerable noise reduction making the gym an overall more pleasing facility. The client was happy with the results of this large undertaking and is pleased with the ANC-600 bafles.
