

CASE STUDY

UNIVERSITY OF FLORIDA FINDS AN ECONOMIC RESOLUTION FOR ECHO PROBLEMS IN OFFICE

University of Florida finds an economic resolution for echo problems in office.

THE PROBLEM

First, we all know schools and institutions have purchasing limits and strict budgets. Secondly, they need to utilize as much space as possible to support their growth and strict budgets. And just like any other school University of Florida found itself unitizing a small room for a variety of important administrative and student tasks. The real problem that came with that space however was echo. Echoes are often associated with large voluminous spaces however in a small space the sound waves bounce much more rapidly off the surfaces of the room creating unpleasant and unwanted noise and reverberation. Also known as “echo”

THE SOLUTION

All Noise Control knew that our cost effective wall panels were the ideal product and due to the small space and the conscious effort to reduce as much reflective surface as possible, recommended that wall panels be fit inside the room to the ceiling. There were orders and manufactured to their needed specs and fit snugly up to the drop ceiling eliminating any potential for noise reflection.

Our wall panels are durably constructed to withstand daily abuse and bumps etc and are manufactured narrow so it had little footprint impact on the already small space.

THE THE RESULT

Echo disappeared... additionally the acoustics became all around softer and more legible. The university met their budget and we exceed their acoustic needs.

Visit our Wall Panel page to see the wide selection of products available for similar and larger scale applications. Please realize that these will have the same effects on a cubicle filled room or individual offices. Did you know that All Noise Control custom manufacturers partition kits and cubicle wall panel kits? Learn more here
