Gate Options

Swing Gate

The Swing Gate offers a highly convenient solution for mezzanine access, allowing for smooth opening and closing. Available in single or double configurations, it is designed to swing inward, ensuring safe operation for employees working on the mezzanine deck.

Lift-Out Gate

The Lift-Out Gate provides an easy way to remove a section of the handrail, facilitating the efficient movement of goods off the mezzanine. Under normal conditions, it functions as a standard handrail, but when needed, it can be lifted from its side mount for quick removal.

Pivot Gate

The Pivot Gate, also known as a “Safety Gate,” ensures secure loading and unloading by always keeping the mezzanine enclosed. As one end of the gate is lifted to allow goods to pass, the opposite end lowers automatically, preventing any open areas on the mezzanine.

Slide Gate

The Slide Gate functions as a handrail until access is required for loading or unloading. It smoothly glides along the adjacent railing, providing an efficient opening while maintaining an unobstructed work area.
