

BETTER BUILT
STRONGER BUILT
ALL NOISE CONTROL

All Noise Control designs specialized sub-station enclosures to protect sensitive electrical equipment. Our exterior modular buildings are pre-engineered to meet each customer's unique requirements. We offer complete turnkey solutions or can provide the building shell only. Your structure will be delivered pre-assembled or assembled on-site by our experienced installation team.

Modular Sub-Stations

All Noise Control has years of experience in designing and installing custom enclosures, understanding the tight schedules and challenging job sites often associated with these projects. Leverage our expertise and let All Noise Control provide your next sub-station enclosure or control house.

- Engineered to withstand wind loads up to 180 mph
- Custom-built to meet your specific application needs
- Insulated and weatherproof roofing systems for durability
- Available in shed, gable, and hip roof designs
- Modular panelized buildings are expandable and easily relocatable
- Can be pre-assembled on a crane-liftable steel base for easy transport

- 3'-0" x 7'-0" half-glass steel doors for visibility and security
- 26-gauge textured steel-faced panels with polystyrene insulation for durability and energy efficiency
- Choice of 3' x 4' picture windows or 36" x 36" horizontal sliding windows
- HVAC options include through-wall or packaged unit systems for climate control
