

ACOUSTIC CEILING CLOUDS

Enhancing Sound Clarity in a Modern Conference Center

Client: Coral Bay Business Hub – Fort Lauderdale, Florida

Facility Type: Multi-room business and events venue

Product Used: Acoustical Ceiling Clouds, Acoustical Fabric Panels, Ceiling Grid Panels

CHALLENGES

Coral Bay Business Hub needed a versatile acoustic solution to serve multiple meeting rooms and event spaces. With high ceilings, glass partitions, and hard floors, sound reverberated heavily during meetings, presentations, and workshops—impacting speech intelligibility and user experience.

Solution

All Noise Control installed acoustical ceiling clouds suspended horizontally above the main conference areas. These **floating acoustic panels** were spaced evenly to trap and absorb reflections across the room. For breakout rooms, fabric-wrapped ceiling clouds in brand-consistent colors were used to blend into the minimalist design while improving sound control.

Outcome

- Improved speech clarity during presentations and virtual calls
- Reduced room reverberation and background noise
- Sleek, floating ceiling design that matched the contemporary architecture
- Enhanced client satisfaction and repeat bookings
