

Sound Control & Privacy in a Modern Corporate Office

Client: Global Tech Solutions Headquarters – New York City, NY

Facility Type: Open-plan office and executive conference spaces

Products Used: Acoustic Ceiling Baffles, Ceiling Clouds, Acoustical Ceiling Panels, Acoustical Fabric

CHALLENGES

With a sleek, minimalist design featuring glass walls and concrete floors, Global Tech Solutions' new open-office headquarters experienced excessive noise bleed, low speech privacy, and prolonged reverberation. Collaboration zones, hot desks, and executive conference rooms needed better **acoustic separation** and comfort without altering the visual appeal.

SOLUTION

All Noise Control was contacted to design a comprehensive **ceiling baffle system**. We installed **suspended ceiling baffles** in open areas, crafted from **polyester acoustic materials**, strategically placed to absorb overhead noise and break up sound pathways. In meeting rooms, we mounted **acoustical ceiling panels** wrapped in **custom acoustical fabric** to enhance **speech intelligibility** while blending with the interior design.

Key Features Implemented

- NRC ratings up to 0.90 using high-density polyester ceiling baffles
- Custom colored ceiling baffles to reflect brand identity
- Drop-in ceiling panels for easy integration with lighting and HVAC systems
- Acoustical fabric chosen for visual softness and durability
- Maintenance-friendly, non-dusting baffle surfaces

Results:

- 60% reduction in echo and background noise across open-plan areas
 - Marked improvement in concentration, privacy, and acoustic comfort
 - Aesthetic enhancement using decorative ceiling baffles in core zones
 - Integration with existing ceiling infrastructure and fire safety systems
-
