Soundproof PIPE AND DUCT BARRIERS

The WBV Series – The Ultimate Pipe and Duct Barrier for Noise Reduction

When it comes to controlling noise transmission in commercial and industrial settings, pipe and duct barriers are essential. The WBV Series from All Noise Control is a high-performance noise barrier designed to effectively reduce airborne noise from pipes, ducts, and mechanical systems.

The WBV Series Wrap Barrier is a loaded vinyl noise barrier featuring a reinforced-foil facing (aluminum-faced mylar). This design allows for seamless installation and integration with standard insulation wraps, ensuring superior noise control.

WHY USE THE WBV SERIES WRAP BARRIER?

Industrial and commercial buildings rely on HVAC systems, pipes, and ducts that often generate significant vibration and noise pollution. Without proper soundproofing, these noises can travel through walls, ceilings, and open spaces, disrupting workplaces and residential environments. The WBV Series helps reduce sound transmission by acting as a flexible acoustic barrier that can be applied over existing insulation or as a standalone solution.
