

Understanding the Benefits of B10LAG2

The **ANC-B10LAG2** is a highly advanced noise reduction product that incorporates thick, quilted fiberglass insulation designed specifically for tackling low-frequency noise. Unlike other materials that struggle to block deeper sounds, the B10LAG2 excels at attenuating these challenging frequencies, ensuring high-performance acoustic isolation.

- **Superior Noise Reduction:** The **B10LAG2** is specifically designed to absorb and dampen low-frequency sounds that are commonly produced by large HVAC systems, industrial machinery, and manufacturing processes. This makes it especially useful for areas where such low-frequency noise is a significant concern, such as in factories, mechanical rooms, and large-scale air-conditioning systems.
- **High R-Value:** The **B10LAG2** has an impressive R-value of 9, which means it provides superior thermal insulation. This not only improves soundproofing but also helps prevent condensation, maintain temperature, and reduce energy costs, all while keeping the system more efficient.
