

Achieving OSHA Compliance with Acoustical Ceiling Baffles

Excessive noise in the workplace can lead to hearing damage and decreased productivity. The Occupational Safety and Health Administration (OSHA) sets standards to protect workers from harmful noise exposure. For environments where noise levels exceed 90 decibels over an 8-hour period, OSHA mandates the use of hearing protection.

Acoustical ceiling baffles, such as the ANC-600 from All Noise Control, can help reduce overall noise levels, bringing them within OSHA's permissible limits. By absorbing sound from multiple directions, these baffles effectively minimize reverberation and background noise, creating a safer and more comfortable work environment

Key Benefits:

- **Enhanced Speech Privacy:** Reduces distractions and improves communication.
- **Improved Concentration:** Minimizes noise-related stress and fatigue.
- **Compliance with OSHA Standards:** Helps meet noise exposure regulations.
