"In our turbine test bays and mechanical rooms, noise levels from turbines, hydraulic units, and generators were extremely high. Installing AB110-EXTR2 acoustic blankets around this equipment immediately reduced both airborne and structural noise."

"The blankets are highly durable and modular, so technicians can remove or reposition panels as needed for testing or maintenance without losing soundproofing efficiency. This flexibility was crucial in our dynamic testing environment."

"Since implementation, worker comfort and safety have improved significantly. Noise is more contained, adjacent areas are quieter, and we can maintain operations efficiently while adhering to OSHA standards. AB110-EXTR2 has truly been a game-changer for us."
