OVERVIEW

Dell Inc. required an acoustic solution to improve sound control within technology development, testing, and collaborative work areas where concentration, communication, and a professional appearance are critical. Equipment operation, conversations, and support activities created background noise that disrupted focused tasks and meetings. To address these challenges without permanent construction, All Noise Control installed the ANC-17 Acoustic Curtain system, delivering decorative acoustic curtains designed for modern corporate and technology environments.

CHALLENGES

Continuous equipment noise and collaborative activity created sound overlap between adjacent workspaces. Dell Inc. required noise reducing curtains that improved acoustic comfort without impacting workflow or visual openness. The solution needed flexible, visually discreet noise blocking curtains that could adapt as layouts and teams evolved.

SOLUTION:

All Noise Control designed and installed ANC-17 acoustic curtains, custom-fabricated as decorative soundproofing curtains suitable for corporate offices, labs, and testing areas. The system combined sound insulating curtains to effectively manage airborne noise while preserving airflow, access, and visibility.

The ANC-17 sound isolation curtain system incorporated sound resistant curtains to define quiet zones for focused work and collaboration.

RESULTS:

- Reduced noise transmission using ANC-17 noise reducing curtains
- Improved acoustic comfort and employee concentration
- Clean, professional appearance achieved with decorative acoustic curtain system
- Quick installation with minimal disruption, providing a cost-effective alternative to permanent soundproof walls
