

ACOUSTIC CEILING CLOUDS

How The Lodge 30A Enhanced Guest Experience with Decorative Ceiling Clouds

In hospitality environments, noise control is directly tied to guest comfort. At The Lodge 30A, bustling dining and event spaces often became overly loud during peak hours, making conversation difficult and reducing the overall guest experience.

Rather than compromising the venue's upscale design with bulky acoustic treatments, The Lodge 30A chose decorative ceiling clouds for noise reduction from All Noise Control.

These soundproof ceiling clouds provided effective ambient noise reduction while enhancing the visual appeal of the space. Installed as suspended cloud sound absorption systems, the panels reduced echo and background noise without requiring wall mounting or structural changes.

Guests immediately noticed the difference—clearer conversations, a more relaxed atmosphere, and a dining experience that felt both vibrant and comfortable.
