At Proctor & Gamble, continuous production activity throughout the facility generated elevated noise levels that began to impact employee comfort, communication, and day-to-day efficiency. Managing noise became an important priority in order to support workplace safety, maintain productivity, and promote overall employee well-being.

To address these challenges, All Noise Control installed the ANC-17 Acoustic Curtain system, using noise reducing curtains to better manage sound transmission across active work areas. These sound resistant curtains were strategically placed to control noise while still allowing the flexibility needed for ongoing operations.

The addition of sound absorbing curtains helped create a more controlled and comfortable acoustic environment. With the ANC-17 system in place, Proctor & Gamble achieved long-term noise reduction and improved working conditions—without relying on permanent soundproof walls or disrupting production flow.
