OVERVIEW

During peak dining and event times, The Lodge 30A faced high ambient noise and echo in its upscale spaces, impacting guest experience. Decorative ceiling clouds for noise reduction were installed to provide dual-sided absorption, overhead sound control, and visual elegance. Guests enjoyed improved speech clarity and overall comfort while the venue maintained its luxury aesthetic.

CHALLENGES

The Lodge 30A is a luxury hospitality venue hosting dining, events, and social gatherings. During peak activity, background noise and echo created an uncomfortable atmosphere for guests. Traditional sound absorption solutions were not visually compatible with the upscale interior, and management wanted soundproof cloud ceiling systems that were both effective and design-friendly.

SOLUTION:

Custom decorative floating acoustic ceiling clouds were installed in dining areas, lobby spaces, and event halls. The ceiling sound dampening panels were wrapped in fabrics matching the venue's color palette, creating a cohesive and elegant aesthetic. Dual-sided absorption and strategic placement ensured effective ambient noise reduction and echo control.

RESULTS:

- Noise levels decreased by 30–35% during peak dining hours
- Guests reported improved speech clarity and overall comfort
- Ceiling clouds provided modular and flexible installation without wall mounting
- Enhanced design appeal that aligned with brand identity
