OVERVIEW

GE Enterprises required flexible acoustic separation within select work and collaboration areas where appearance and functionality were equally important. Rather than permanent construction, the facility sought a visually polished noise control solution that could adapt to changing operational needs. All Noise Control installed the ANC-17 Acoustic Curtain system, providing decorative acoustic curtains designed for clean, professional environments.

CHALLENGES

Activity within adjacent work areas generated distracting background noise that interfered with communication and focus. GE Enterprises required noise reducing curtains that could be repositioned as layouts evolved. The solution needed attractive sound blocking curtains that offered effective sound control while remaining visually unobtrusive.

SOLUTION:

All Noise Control installed ANC-17 acoustic curtains as decorative soundproofing curtains suitable for professional, people-focused spaces. The system has sound insulating curtains to control airborne noise while preserving accessibility and visual continuity. This sound isolation curtain system utilized sound resistant curtains to define quiet zones without permanent walls.

RESULTS:

- Clear acoustic separation using ANC-17 acoustic curtains
- Improved communication and operational efficiency
- Enhanced professional appearance through decorative acoustic curtains
- Cost-effective alternative to permanent soundproof walls
