“Across multiple schools in our district, excessive noise and reverberation were impacting classroom instruction and student focus. Teachers reported vocal strain, and students were easily distracted in both classrooms and large shared spaces like cafeterias and gymnasiums.

All Noise Control’s acoustic ceiling cloud systems provided a practical, scalable solution. The ceiling-mounted sound dampening panels reduced background noise, controlled reverberation, and improved speech clarity throughout our facilities.

Since installation, teachers have noted better communication and improved student engagement, while administrators appreciate the durability and flexibility of the system. The ceiling clouds have played a meaningful role in creating healthier, more effective learning environments across our schools.”
