CONTROL NOISE FROM ABOVE

Excessive noise and echo are common challenges in modern spaces with high ceilings, open layouts, and hard reflective surfaces. All Noise Control Acoustic Ceiling Baffles are engineered to absorb sound at the source—overhead—where traditional wall treatments are often limited or ineffective.

All Noise Control's baffles reduce reverberation, improve speech clarity, and create quieter, more comfortable environments without compromising architectural design.

WHAT ARE ACOUSTIC CEILING BAFFLES?

Acoustic ceiling baffles are suspended sound-absorbing panels designed to control noise in large or open areas. Hung vertically or horizontally from the ceiling, they absorb sound from multiple directions, making them highly effective in spaces with high ceilings or exposed structures.

All Noise Control baffles are manufactured using high-performance acoustic materials that target mid- and high-frequency noise—the primary contributors to echo and speech distortion.

KEY BENEFITS

Effective Sound Absorption

Reduces echo, reverberation, and background noise for clearer communication and improved comfort.

Ideal for High-Ceiling Spaces

Designed specifically for large, open areas where wall panels or ceiling tiles alone are insufficient.

Suspended Ceiling Soundproofing Solution

Absorbs sound overhead without interfering with lighting, HVAC, or sprinkler systems.

Modular & Scalable Design

Easily reconfigured or expanded as spaces change or grow.

Architectural & Aesthetic Flexibility

Clean, modern appearance with customizable sizes, layouts, and finishes.

APPLICATIONS

All Noise Control Acoustic Baffles are ideal for:

- Open-plan offices and corporate workspaces
- Conference rooms and collaboration areas
- Manufacturing and production facilities
- R&D labs and innovation centers
- Educational buildings and lecture halls
- Healthcare lobbies and public spaces
- Gymnasiums, cafeterias, and large venues

Any space experiencing excessive echo or noise buildup can benefit from ceiling baffle systems.

APPLICATIONS

All Noise Control offers fully customizable acoustic baffle solutions, including:

- Custom sizes and thicknesses
- Vertical or horizontal suspension
- Adjustable spacing and hanging heights
- Color and finish options to match interior design
- Configurations tailored to acoustic performance goals

Each system is designed based on your space, ceiling height, and noise challenges.

WHY CHOOSE ALL NOISE CONTROL

With decades of experience in industrial and commercial noise control, All Noise Control delivers solutions that perform in real-world environments.

- Proven acoustic performance
- Durable, long-lasting materials
- Expert design support and consultation
- Solutions tailored to your specific application

We don't just sell products—we design complete noise control solutions.

TRANSFORM YOUR SPACE WITH BETTER ACOUSTICS

Whether you're addressing noise in an office, facility, or large open environment, All Noise Control Acoustic Ceiling Baffles provide an effective, flexible, and visually appealing sound control solution.

Reduce noise. Improve clarity. Enhance comfort.
