Bay Eight Recording Studios in Florida runs multiple recording rooms, control booths, and vocal suites where sound isolation and clarity are essential. Gaps around studio doors allowed noise to travel between rooms, affecting recordings and client privacy. The studio needed a flexible door acoustic solution that didn't require permanent construction.

All Noise Control installed ImpactaCore® ANC-AB2DC acoustic door blankets, turning each doorway into a portable soundproof door cover and noise-reducing door blanket. These heavy-duty blankets feature a 1-lb per sf sound barrier and 2" fiberglass absorbers, delivering both sound blocking and absorption. With STC 29 and NRC 0.85, they provide a high-performance, removable solution for studio doors.

Lightweight and modular, the ImpactaCore® ANC-AB2DC blankets mount easily with grommets along the top and hook-and-loop fasteners along the vertical edges, available in gray, white, black, or tan, they fully seal doorways and can be repositioned as layouts change. Fire-rated (Class A) and industrial-grade, they offer long-lasting noise control solutions without disrupting studio operations.

Thanks to All Noise Control's acoustic door blankets, Bay Eight now enjoys cleaner recordings, improved room isolation, and enhanced client privacy. These removable soundproofing blankets deliver professional-grade sound absorption throughout the studio.
