“In a food manufacturing environment, maintaining a clean, comfortable, and efficient workspace is extremely important. However, HVAC systems, air duct wrap, and mechanical piping can introduce background noise that builds up over time.

Since using the ANC-B10LAG1 soundproof pipe and duct wrap, the difference has been clear. The fiberglass pipe wrap absorbs vibration, while the integrated barrier provides effective HVAC noise blocking. It fits seamlessly into our facility and meets our safety standards, all while helping reduce noise and improve thermal efficiency. It’s been a practical and dependable solution for our operations.”
