Noise in industrial facilities can affect productivity, safety, and employee comfort. At Central Florida Industrial Services, heavy machinery, HVAC systems, and loading areas generated high-decibel sound that traveled through doors, disrupting workspaces.

To address this, All Noise Control installed ImpactaCore® ANC-AB2DC acoustic door blankets, a flexible soundproofing blanket solution for key doorways. Each heavy-duty acoustic door blanket features a 1-lb per sf sound barrier and 2" fiberglass absorbers, delivering both sound absorption and noise blocking. With STC 29 and NRC 0.85, these noise-reducing door blankets effectively control airborne sound and reduce echo, all without permanent construction.

Lightweight, fire-rated, and easy to install with grommets or hook-and-loop fasteners, the ImpactaCore® ANC-AB2DC blankets are also removable door soundproofing blankets. Neutral colors blend seamlessly into industrial spaces while providing acoustic barrier blankets and sound blocking door blankets for sensitive areas.

With these high-performance soundproof door blankets, Central Florida Industrial Services achieved quieter, safer, and more focused workspaces. Employees now enjoy improved concentration, reduced distractions, and adaptable industrial noise control blankets that can move with changing layouts.
