“Luxury hospitality demands quiet, comfort, and attention to detail. Mechanical noise from HVAC systems, air duct wrap, and piping can disrupt the guest experience if not properly controlled.

The ANC-B10LAG2 helped us address noise at its source. The combination of fiberglass duct wrap and sound barrier significantly reduced noise from mechanical systems, while the sleek white finish blended seamlessly into back-of-house areas. The HVAC wrap delivered both acoustic control and thermal efficiency, helping us maintain the high standards our guests expect.”
