*“Our power generation facility operates with high-temperature piping, outdoor systems, and continuous mechanical activity. Noise control and thermal insulation are both critical for safety and operational efficiency.*

*All Noise Control’s ANC-B10LAG2 pipe soundproofing wrap provided a durable solution for our industrial environment. The waterproof fiberglass pipe lagging reduced noise from high-pressure pipes while also preventing heat loss and condensation. The product performed exceptionally well as an outdoor pipe wrap, holding up to harsh conditions while delivering reliable HVAC noise blocking and thermal protection.”*
