“In a steel manufacturing environment, exposed piping and large duct systems can quickly become major noise pathways. We needed a solution that could withstand heavy industrial use while delivering real sound reduction.

The ANC-B10LAG2 acoustic pipe and duct wrap exceeded expectations. The soundproof duct wrap absorbed vibration and blocked noise from traveling through pipes and ducts, while the durable fiberglass pipe wrap provided excellent thermal insulation. Its waterproof construction and straightforward installation made it a dependable choice for both indoor systems and outdoor applications across our facility.”
