“With a property as large and active as ours, guest comfort is always a top priority. Mechanical rooms, HVAC systems, and exposed piping can easily become sources of unwanted noise if they’re not properly treated.

After installing All Noise Control’s ANC-B10LAG2 acoustic pipe and duct wrap, we noticed a clear reduction in mechanical noise traveling through our building systems. The soundproof pipe and duct wrap helped contain HVAC noise while also improving thermal insulation. The fiberglass pipe wrap performed well in both interior mechanical areas and outdoor pipe wrap applications, allowing us to maintain a quiet, comfortable environment for guests without impacting daily operations.”
