*“In a healthcare setting, maintaining a calm and quiet environment is essential for patient recovery and staff focus. Noise from HVAC systems, ductwork, and mechanical piping can easily travel through hospital infrastructure if left untreated.*

*The ANC-B10LAG2 duct and pipe wrap provided an effective solution for HVAC noise blocking throughout our facility. The pipe soundproofing wrap reduced vibration and airborne noise while also helping prevent heat loss and condensation. Its waterproof, fire-rated design and clean appearance made it a strong fit for a hospital environment where safety and reliability are critical.”*
