“Our facility operates around the clock, and minimizing mechanical noise is critical to maintaining patient comfort. HVAC duct wrap and exposed piping had been contributing to background noise in certain areas of the hospital.

Since installing All Noise Control’s ANC-B10LAG2 sound deadening duct wrap, we’ve seen noticeable improvements. The acoustic pipe and duct wrap effectively reduced noise transmission while functioning as a durable HVAC duct insulation wrap. The added thermal protection and moisture resistance made it an ideal solution for both indoor systems and exposed mechanical areas.”
