"Our innovation labs are designed for creativity, collaboration, and high-tech prototyping, but the acoustic environment was a persistent problem. Hard surfaces and high ceilings caused echoes and uneven sound distribution, making presentations and discussions difficult. We turned to All Noise Control, who installed custom acoustic ceiling baffles that were both functional and aesthetically pleasing. The baffles reduced reflections and reverberation, improving speech clarity and overall focus. Employees could collaborate more effectively, presentations were easier to understand, and team meetings became more productive.

The installation process was seamless, and the modular design allows us to adjust placement as lab layouts change. Staff feedback has been overwhelmingly positive—they feel less distracted and more comfortable. This upgrade has truly enhanced both the functionality and atmosphere of our innovation spaces."
