“In semiconductor fabrication, even small environmental factors can affect workflow and concentration. Our cleanrooms operate with continuous airflow systems and high-precision equipment, which created noticeable sound reflection within certain production zones. After integrating the All Noise Control Cleanroom Wall Panels, we observed a more acoustically balanced environment that supports clearer communication between technicians and engineers.

The panels aligned seamlessly with our clean manufacturing standards. Their smooth, encapsulated surface maintains cleanliness while delivering measurable reverberation control. The installation was efficient and non-disruptive, and the improvement in overall acoustic comfort has positively supported daily operations in our controlled environments.
